# **DEFINING STANDARDS IN CANCER CARE** ESMO Tools and Frameworks

Prof. George Pentheroudakis MD MSc PhD

Chief Medical Officer - European Society for Medical Oncology (ESMO)

## **ESMO MISSION & VISION**

Improve quality of prevention, diagnosis, treatment and care

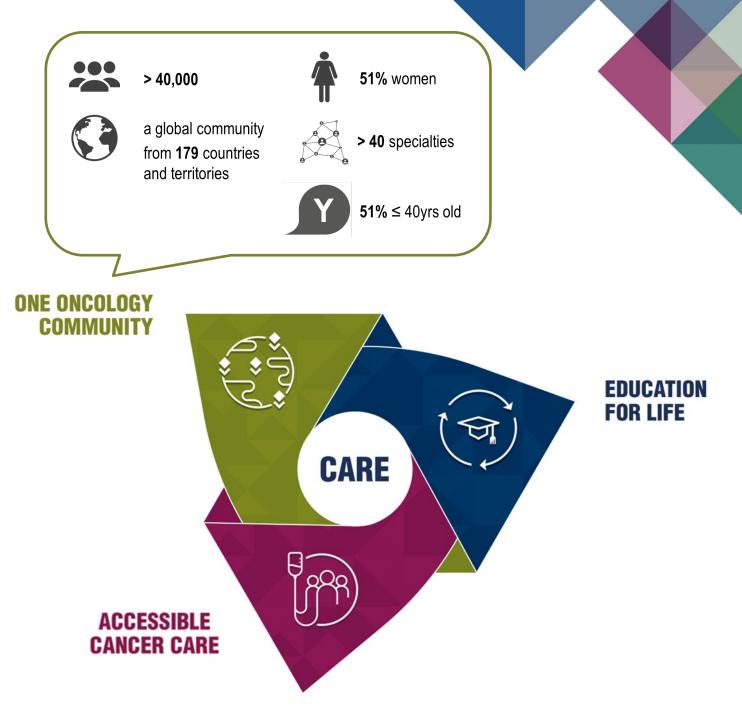

Advance the art and practice of oncology

Disseminate knowledge to cancer patients and the public

Educate and train oncology professionals

Ensure a high standard of qualification

Promote equal access to optimal cancer care

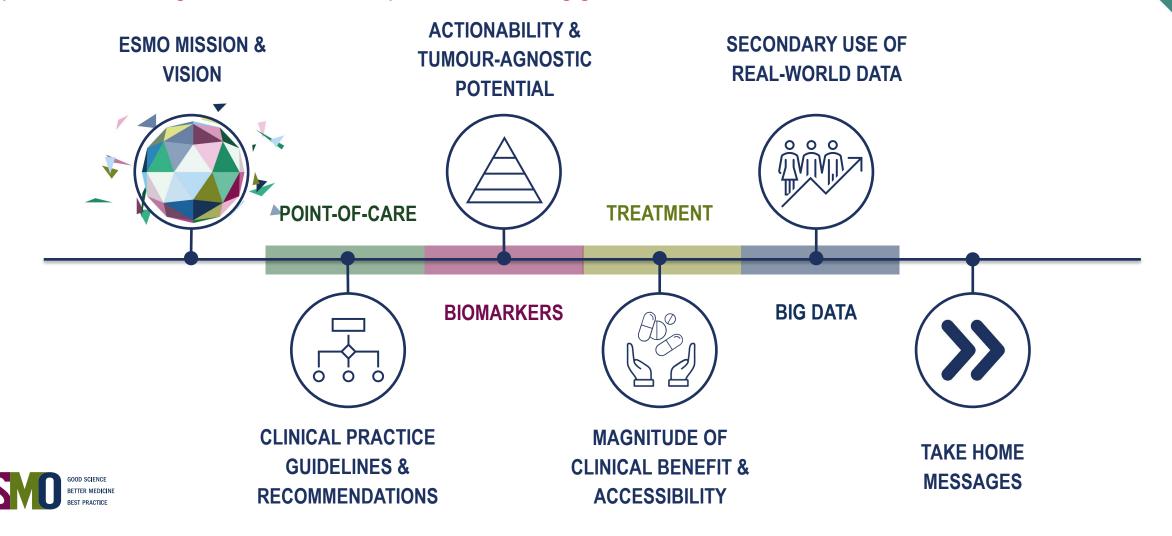

# DEFINING STANDARDS, ENABLING OPTIMAL PRACTICE OF ONCOLOGY

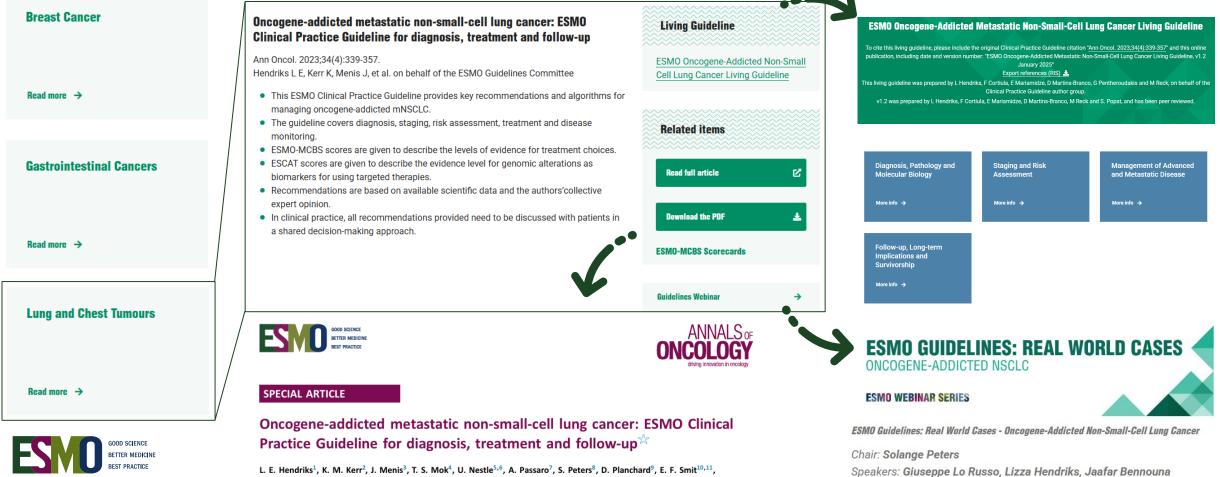

ESMO Frameworks and Tools

https://www.esmo.org/scales-and-tools, https://www.esmo.org/guidelines

# CLINICAL PRACTICE GUIDELINES

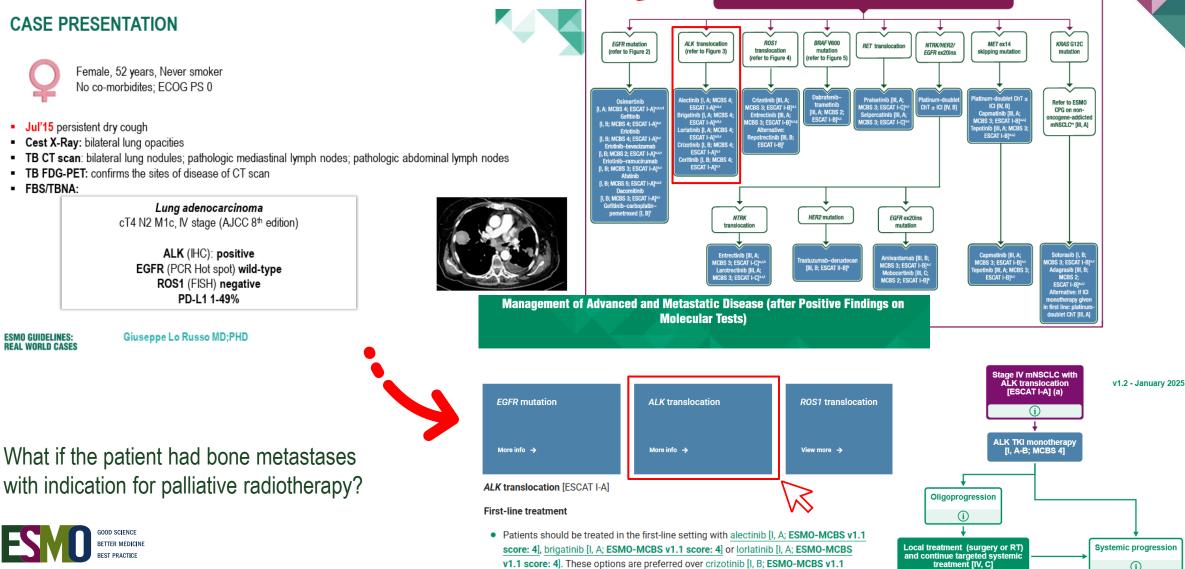

The ESMO Clinical Practice Guidelines, developed by leading experts and based on evidence-based medicine, provide a set of recommendations on state of the art care to help HCPs and patients.

B. J. Solomon<sup>12</sup>, G. Veronesi<sup>13,14</sup> & M. Reck<sup>15</sup>, on behalf of the ESMO Guidelines Committee

## ESMO CPG @ POINT-OF-CARE

### CASE PRESENTATION

v1.1 score: 4]. These options are preferred over crizotinib [I, B; ESMO-MCBS v1.1

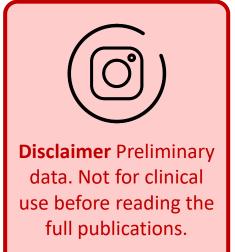

score: 4] or ceritinib [I, B; ESMO-MCBS v1.1 score: 4].

Stage IV mNSCLC, molecular tests positive (EGFR/ALK/ROS1/BRAF/RET/NTRK/MET/HER2/EGFRex20ins/KRAS G12C)

(i)

## **ESMO-ESTRO CONSENSUS STATEMENTS ON**

## SAFETY OF COMBINING TARGETED THERAPIES WITH RADIOTHERAPY

**Table 1.** Delphi consensus recommendations for various drug class-radiotherapy combinations. The traffic light colors represent the recommended safety measure for each scenario.

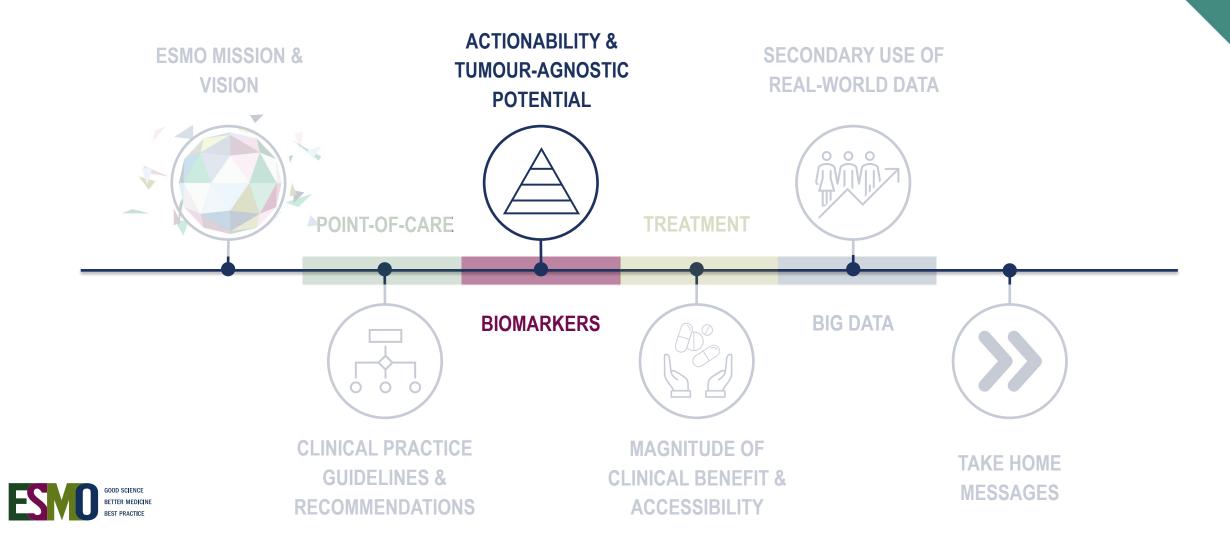

rradiated area	Type of rac	liotherapy	CDK4/6	HER2	PARP	mTOR	EGFR	ALK	BRAF/ MEK	PD-(L)1	CTLA-4	VEGF	Mult targe
	Low-dose	palliative

## **DEFINING STANDARDS**

ESMO Frameworks and Tools

## **ESCAT: ESMO** Scale of Clinical Actionability for molecular Targets

	ESCAT evidence tier		Required level of evidence	<b>Clinical implication</b>	
	I.	I-A	Prospective, randomised clinical trials show the alteration-drug match in a specific tumour type results in a clinically meaningful improvement of a survival end point		
Ready for routine use	Alteration-drug match is associated with improved outcome in clinical trials	I-B	Prospective, non-randomised clinical trials show that the alteration-drug match in a specific tumour type, results in clinically meaningful benefit as defined by ESMO MCBS 1.1	Access to the treatment should be considered standard of care	
		I-C	Clinical trials across tumour types or basket clinical trials show clinical benefit associated with the alteration-drug match, with similar benefit observed across tumour types		
Investigational	II Alteration-drug match is associated with antitumour	II-A	Retrospective studies show patients with the specific alteration in a specific tumour type experience clinically meaningful benefit with matched drug compared with alteration-negative patients	Treatment to be considered "preferable" in the context of evidence collection either as a	A framework to
	associated with antitumour activity, but magnitude of benefit is unknown	II-B	Prospective clinical trial(s) show the alteration-drug match in a specific tumour type results in increased responsiveness when treated with a matched drug, however, no data currently available on survival end points	prospective clinical trial	genomic alterat as targets
	III Alteration-drug match suspected to improve outcome based on clinical trial data in other tumour type(s) or with similar molecular alteration IV Pre-clinical evidence of	III-A	Clinical benefit demonstrated in patients with the specific alteration (as tiers I and II above) but in a different tumour type. Limited/absence of clinical evidence available for the patient-specific cancer type or broadly across cancer types	Clinical trials to be discussed with	precision onco
Hypothetical target		III-B	An alteration that has a similar predicted functional impact as an already studied tier I abnormality in the same gene or pathway, but does not have associated supportive clinical data	patients	
		IV-A	Evidence that the alteration or a functionally similar alteration influences drug sensitivity in preclinical <i>in vitro</i> or <i>in vivo</i> models	Treatment should "only be considered" in the context of early	Ready for routine use
	actionability	IV-B	Actionability predicted in silico	clinical trials. Lack of clinical data should be stressed to patients	Investigational evidence tier II
Combination development	V Alteration-drug match is associated with objective response, but without clinically meaningful benefit		Prospective studies show that targeted therapy is associated with objective responses, but this does not lead to improved outcome	Clinical trials assessing drug combination strategies could be considered	Hypothetical target evidence tier III evidence tier V Combination development ESCAT evidence tier V Lack of evidence ESCAT evidence tier X
Lack of Evidence	X Lack of evidence for actionability		No evidence that the genomic alteration is therapeutically actionable	The finding should not be taken into account for clinical decision

٠

### PUBLIC POLICY

- Grading derived from the ESMO-MCBS provides a backbone for value evaluations.
- Can help public policymakers in the advancement of 'accountability for reasonableness' in resource allocation deliberations

### **CLINICAL GUIDELINES**

- ESMO-MCBS provides a clear, well-structured and validated mechanism to indicate the magnitude of clinical benefit.
  - This, in addition to the level of evidence, can inform both national and international guidelines

### **CLINICAL DECISION**

- ESMO-MCBS scoring can help clinicians <u>weigh</u> the relative merits of competing relevant therapeutic options.
- Can assist <u>explaining</u> the relative merit of therapeutic options to patients and their families.

### EDITORIAL DECISION

The ESMO-MCBS may be of use to editors, peer reviewers and commentators in considering the clinical significance of research findings

### EDUCATION

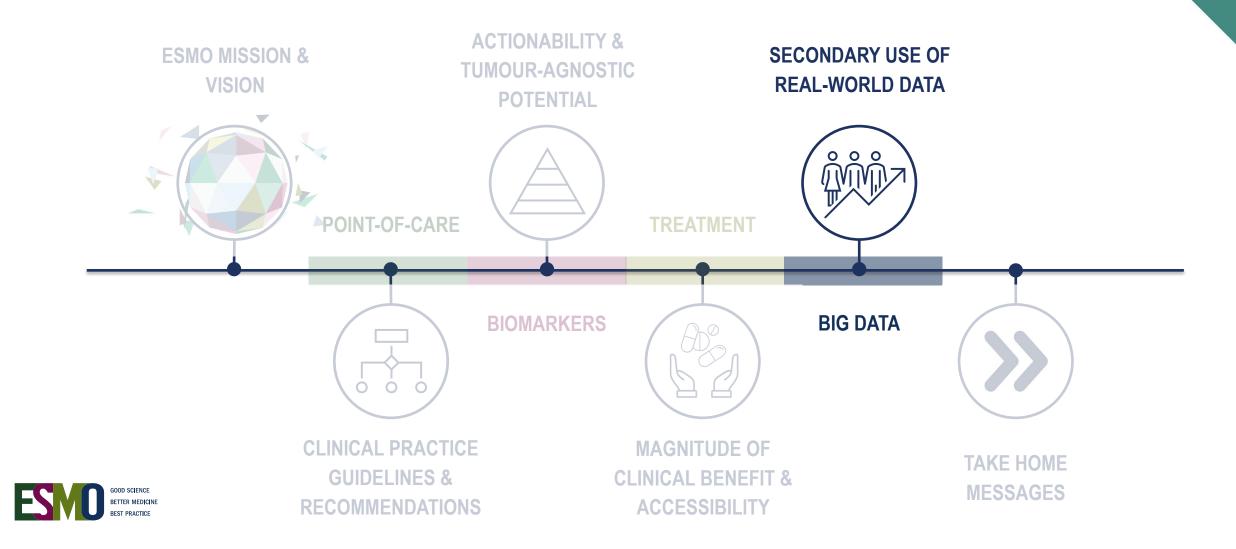

- The ESMO-MCBS is a powerful tool to teach a disciplined and validated approach to data interpretation.
- It is especially valuable for oncologists in training and for application in journal club discussion.

## **DEFINING STANDARDS**

ESMO Frameworks and Tools

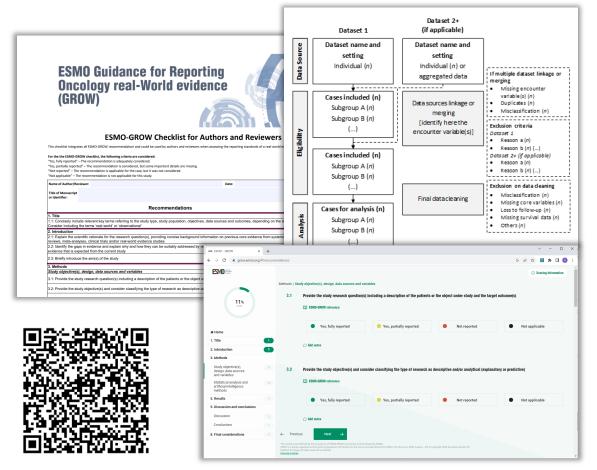

# ESMO GUIDANCE FOR REPORTING ONCOLOGY REAL-WORLD EVIDENCE (ESMO-GROW)

The first reporting guidance specifically developed for oncology RWE studies

- Detailed **list of recommendations** for authors and reviewers of RWE publications.
- Broad Scope: **Descriptive to Analytical**
- Addresses new treatments, molecular-based epidemiology, oncology-specific variables, and tech-based RWE research (AI, machine learning)
- Facilitates harmonised interpretation by all stakeholders

ESMO RWDD

## **ESMO-GROW** informative Score

**Detailed Scoring** 

Reporting informative score useful for:

- ✓ authors while drafting the manuscript
- ✓ editors and peer-reviewers after submission
- ✓ readers while critically appraising the report

## **ESMO FRAMEWORKS AND TOOLS - TAKE HOME MESSAGES**

## **CLINICAL PRACTICE GUIDELINES & RECOMMENDATIONS**

- ✓ ESMO Clinical Practice Guidelines provide recommendations to help HCPs and patients with the best care options.
- ESMO produces Precision Oncology Statements for the optimal practice of molecular oncology and for safely combining radiotherapy with targeted agents or immunotherapy.

## **ACTIONABILITY & TUMOUR-AGNOSTIC POTENTIAL**

- SCAT is a systematic framework to rank molecular targets based on evidence available supporting their value as clinical targets.
- ✓ ESMO Tumour-Agnostic Classifier and Screener sets minimum requirements for treatments eligible for tumour-agnostic potential.

## **MAGNITUDE OF CLINICAL BENEFIT & ACCESSIBILITY**

 ESMO-MCBS facilitates improved decision-making regarding the value of anti-cancer therapies, promotes accessibility and reduces inequity of access to high value cancer treatments.

## SECONDARY USE OF REAL-WORLD DATA

✓ ESMO-GROW recommendations checklist can be used by authors and reviewers for assessing the reporting of RWE studies.
